EDUCATION M.Arch., University of New Mexico, 2005
B.A., Biology University of Vermont, 1998

BIO I have worked as an architect on a variety of building types through all phases of project design and construction. The majority of my professional experience is with research facility design. I enjoy technically challenging projects and appreciate the complexities of building systems integration.

Prior to pursuing a career in Architecture, I earned a Bachelors Degree in Biology from the University of Vermont. I have abundant research experience including several years working for the Pacific Northwest Research Stations in Alaska and Oregon. As an architect, research based design is my focus. I consistently seek out opportunities to use integrated processes and incorporate performance analysis into building design.

AREAS OF INTEREST Environmental Design, Sustainability, Performance Analysis, Building Science, Laboratory Facility Design

COURSES Arch 241, Sustainability

SERVICES USGBC New Mexico Chapter Board of Directors
